

WGSD Wireless Network Access GEORGE

*Single sign-on (SSO) is a session/user authentication process that permits a user to enter one username and password in order to access multiple applications such as your computer, network drives, printers and WWW. The process authenticates the user for all the applications they have been given rights to and eliminates further prompts when they switch applications during a particular session.

The benefits of authenticating using SSO is that you only need to login one time to gain proper access to network resources. SSO is only available with computers that are joined to the district domain (If you press Ctrl+Alt+Delete and enter a WGSD username and password).

WGSD Wireless Network Access WEBnet

WHO SHOULD USE WEBnet

1. All BYOD or non-authenticated single user devices such as iPads, iPhones and Android devices.

WEBnet

2. Attach to "WEBnet" for wireless access.

District Firewall

5. You will then be given the proper access to the World Wide Web.

3. When you launch a Web browser the district firewall will redirect you to a webpage and ask you to enter your district username and password.

Username
Password

WWW

4. Your domain credentials will be authenticated against the district Domain controllers and you will be placed into the proper content filtering group.

PLEASE NOTE:

Using web authentication teachers will be able to access sites such as YouTube and Twitter on their single user device and students will have greater access to web resources. Using web authentication will require you to enter your domain credentials once every 60 minutes.
